

Microtracker KeyFOB Instructions

Thank you for purchasing a Microtracker MT-100 with RF!

To configure your RF unit to your device first open the square rubber cover on the side of MT-100; you should be able to see a learning button. Press the learning button on MT-100 for 1.2 seconds, and then press any key except SOS key on the RF remote. This will save the new RF remote ID into the memory of MT-100. If you think you have not done it correctly then hold the learning key for more than 7 seconds, this will erase all learned RF remote ID's on your MT-100 then you can try to set your RF again.
